

Healing Power from Bone Marrow Stem Cells

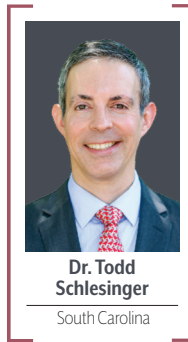

The most successful doctors in aesthetics apply their knowledge and skill to comprehensive patient skin management. Of course, your patients show up for toxin and filler, but while you can temporarily erase their wrinkles with a syringe, it takes more to restore youthful glow and vitality to the skin. Advances in regenerative medicine have yielded a new tool to help achieve those results.

Mesenchymal bone marrow stem cells from a young adult donor are cultured in the laboratory to produce precisely the correct balance of cytokines and growth factors for skin healing with minimal inflammation. These biosignals, when topically applied, are able to restore the phenotype of young adult skin to a patient of any age.

Formulated into rational products for office-based aesthetics treatments and daily home use, this technology is available under the name AnteAGE MD®.

Inflammation: The Root of All Aging

Research has unequivocally shown that chronic inflammation is the catalyst for visible signs of aging in the human body. The hallmark of AnteAGE MD® products are anti-inflammatory ingredients intentionally formulated to give you lasting results, at the cellular level. Conditioned media of the bone marrow stem cell has been shown in a controlled study to accelerate wound healing at twice the efficacy compared to fibroblast cell media.

Dr. Todd Schlesinger
South Carolina

“Thinking of the purpose of other cells from which media may be derived, fat (adipose) is used for energy storage and temperature regulation while umbilical blood is used for newborn growth. Bone marrow is the only truly regenerative source of stem cell derived media.”

Test Patch at Max Setting (280 volt x 28 msec)

4 Days Post - Untreated

4 Days Post - Treated with AnteAGE MD® Growth Factor Solution

Aesthetic Exosomes

In The Lab Cellese together with sister company XOSTem are pushing the envelope of regenerative medicine and the promising new field of Exosome therapies.

Exosomes are nanoparticulate extracellular vesicles that aggregate and export paracrine biosignals, nucleic acid modulators of phenotypic expression such as mRNA's and miRNA's.

Exosomes are able to diffuse through tissues, seek out target cells, alter local immune functions, and effect changes to skin through epigenetic modulation.

The scientists at XOSTem are culturing, classifying, concentrating, and preserving exosomes to address aesthetic treatment modalities for aging skin and hair loss.

Interested in being a trial site for exosome research in aesthetics?

Great Skin Starts At Home

Patients want something that gives them results they can see quickly without getting convoluted in too many steps. AnteAGE MD® has solved for both. The body's natural ability to heal and repair itself is the foundational premise of the 2-part Serum and Accelerator System. Precisely formulating cultured growth factors with 18 active ingredients, we offer a solution that is easy, safe and effective.

Bone marrow stem cell media and recombinant growth factors combine with classical ingredients that repair and improve the signs of aging. In just two steps, flood the skin with regenerative growth factors, vitamin C, vitamin E, hyaluronic acid, bakuchiol (a non-irritating retinol alternative) peptides and antioxidants.

The results include an increase in collagen volume, reduced pore size, an even skin tone, reduction in fine lines and wrinkles and an overall luminous glow that your patients will notice within days.

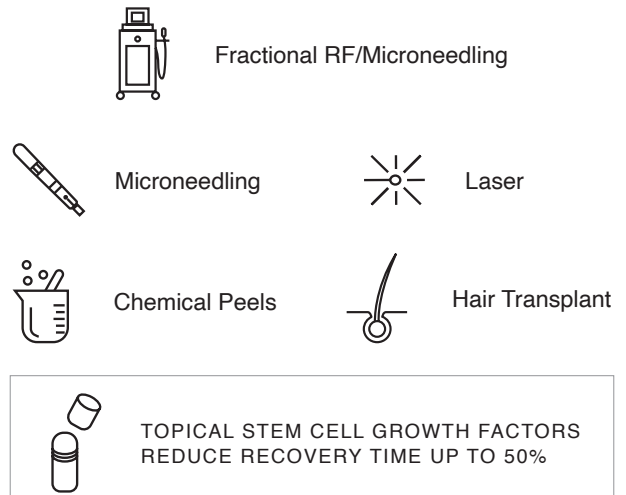

For microneedling, hair regrowth, vaginal rejuvenation, skin brightening, and general anti-aging, AnteAGE MD® delivers the exact natural biosignals needed for healing and rejuvenation.

See For Yourself

AnteAGE MD® offers specialized treatment adjuvants to maximize results and minimize downtime. Combining modalities with anti-inflammatory growth factor tools promote healing unlike any other topically applied skin product in the post-procedural scenario.

AnteAGE® restores the skin's ability to respond to damage and repeated stresses at a level that would be typical of the same person at a much younger age.

TREATMENT MODALITIES

“AnteAGE products contain scientifically validated ingredients designed to complement powerful growth factors, both natural and recombinant, for a complete regenerative regimen. Produced in a world-class facility, the outcomes speak for themselves.”

Dr. Todd E. Schlesinger, MD,
FAAD, FASMS
