CORPORATE CAPABILITIES

Siegfried USA, Inc.

Corporate description

Siegfried is a globally active, independent Swiss company. As a supplier and service provider for the worldwide pharmaceutical industry, the company concentrates on the development and production of pharmaceutical active substances and customer-manufactured finished drugs and offers all related services. Siegfried focuses on maintaining a high level of competence, working together with clients as partners. The company's specific know-how in process development, in chemical and pharmaceutical production, and in managing complex outsourcing projects is used to contribute significantly to the success of its customers.

Technical services

Each of Siegfried's multipurpose facilities is equipped with glass-lined, stainless steel, and Hastelloy reactors ranging in size from 800 to 7000 L. The combined facilities have a total reactor volume in excess of 500 m³ and an annual output of 1500 metric tons of finished products. Each of the versatile facilities can operate its reactors over a wide temperature range (-50 to +250 °C) and process products in modern centrifuges, pressure filters, and membrane filter presses. New state-of-the-art milling and blending facilities, an isolated dryer building, R&D laboratories, and a new state-of-the-art CGMP process research and development building have recently been constructed.

Facilities

Siegfried has two manufacturing multipurpose CGMP sites: one in Zofingen, Switzerland, and one in Pennsville, New Jersey. The company continually complies with quality, environmental, and safety standards. This year, FDA inspected our facilities in Zofingen and Pennsville and issued "No Action Indicated" (NAI) for each, giving our company the best possible compliance rating.

Major products/markets served

Siegfried sells its products and services to pharmaceutical and biotechnology companies globally. The company is organized into three business areas, each with global responsibility:

- Siegfried Actives offers custom development and manufacturing services and also manufactures generic APIs and advanced pharmaceutical intermediates, as well as selected controlled substances, including hydrocodone, oxycodone, morphine, and codeine.
- Siegfried Generics offers finished dosage forms and dossiers to the generic pharmaceutical industry.
- Siegfried Biologics offers a full line of pharmaceutical services to emerging pharmaceutical and biotech companies.
