Emerson Process Management

Corporate Description

The process-systems division of the Emerson Process Management group of companies is headquartered in Austin, Texas. Emerson Process Management is a leading producer of process-automation products, including automation systems and software, measurement devices, analytical instrumentation, and valves. Emerson Process Management is one of the eight business competencies of Emerson (NYSE:EMR).

Technical Services

Full main automation contractor services are available to handle various project-execution needs. The services offered by our industry and automation experts can help you build, connect, improve, and maintain your equipment and process so you can make the most of your automation investment. Additional services and consulting help clients understand and meet manufacturing, corporate, and FDA demands.

Facilities

Emerson Process Management provides:

- Products and services worldwide in more than 200 principal cities
- Service in more than 75 countries
- More than 60 training, manufacturing, and service centers in more than 25 countries.

Major Products

The DeltaV™ system delivers an integrated batch environment with:

- A batch-history view modeled after S88.01
- Single-engineering database for recipe management and control
- Seamless interface between batch operations and control
- Integrated version control, audit trail, and electronic signature management
- Integrated batch-history solution that does not require user configuration.

The result is a totally integrated batch solution that's easy to engineer, easy to use, and easy to validate.

The DeltaV system incorporates automatic configuration audit trail and electronic signature technology to assist in rapid system commissioning and with regulatory compliance such as FDA's 21 CFR Part 11.

Syncade™ Smart Operation Management Suite is a group of software modules that provide easy, flexible, integrated solutions for resource management, operations optimization, integrated information, and quality and compliance requirements—improving operations performance.

Each software element is modular and scalable, thus enabling the user to address a specific function and then add capability as needed. By using the latest technology and adhering to standards, this solution reduces engineering, testing, and maintenance costs. Syncade suite supports your sustainable manufacturing practices by reducing waste and eliminating paper.

Markets Served

Emerson Process Management serves a diverse array of processing industries, including refining, oil and gas production and distribution, chemicals, food and beverage, pharmaceuticals, pulp and paper, power, and others. Emerson Process Management's customers include the top pharmaceutical companies as well as 18 of the 24 world's largest specialty chemical companies. Large-scale manufacturers and small start-up companies alike appreciate the experience and expertise incorporated into the company's batch processing, recipe management, and enterprise integration solutions.
