OUTSOURCING and Consulting Services

Halo Pharma

Corporate Description

A New Jersey based CMO, Halo Pharma provides scientific, regulatory and development expertise as well as a spectrum of manufacturing services to help customers bring their products to market quickly and effectively. Halo Pharma offers fully integrated capabilities in a variety of dosage forms, including tablets, capsules, powders, liquids, ointments, and suppositories. The company is registered to work with any of these dosages in the CII–CV designations.

Halo's capabilities in the areas of tech transfer, process and product development, production scale-up and validation, and analytical method development, allow it to partner with clients from development through commercialization, or at any point along the way.

Facilities

Staffed by over 100 employees with an average tenure of 20 years, Halo's 170,000 sq. ft. facility in Whippany, NJ is capable of developing, manufacturing and finishing oral dosages and sterile ointments. The facility also includes a highly-flexible API Kilo Lab for the manufacture of key intermediates and small volume, high-value active ingredients. This multipurpose Kilo Lab can accommodate a wide variety of chemical reactions. The facility has an excellent regulatory history.

Major Products

Halo's products and services are organized into two main areas—Pharmaceutical Development and Commercial Manufacturing.

Specializing in all aspects of the CMC dosage form section of the NDA, Halo's Pharmaceutical Development services extend from Phase I through Registration and include Project Management, Formulation Development, and Analytical Development.

Halo's Commercial Manufacturing capabilities include:

- High and Low Shear Granulation
- Spray Granulation
- Fluid Bed Drying
- Tray Drying
- "B" and "D" Compression
- Bi layer Compression
- Encapsulation
- Aqueous Film Coating
- Sterile Ointments
- Suppository Manufacture
- Liquid Manufacture
- Primary Packaging (Bottles, Tubes, Blister packages)
- Secondary Packaging
