

Learning Retention: *Sustained* Learning

Put retrieval practice into everyday activities with UNIFY Reinforce. Studies show that 1 hour after learning key information, individuals only retain 44.2% of material, and a month later just 21.2%. What if we could increase the retention curve, mitigating the forgetting curve?

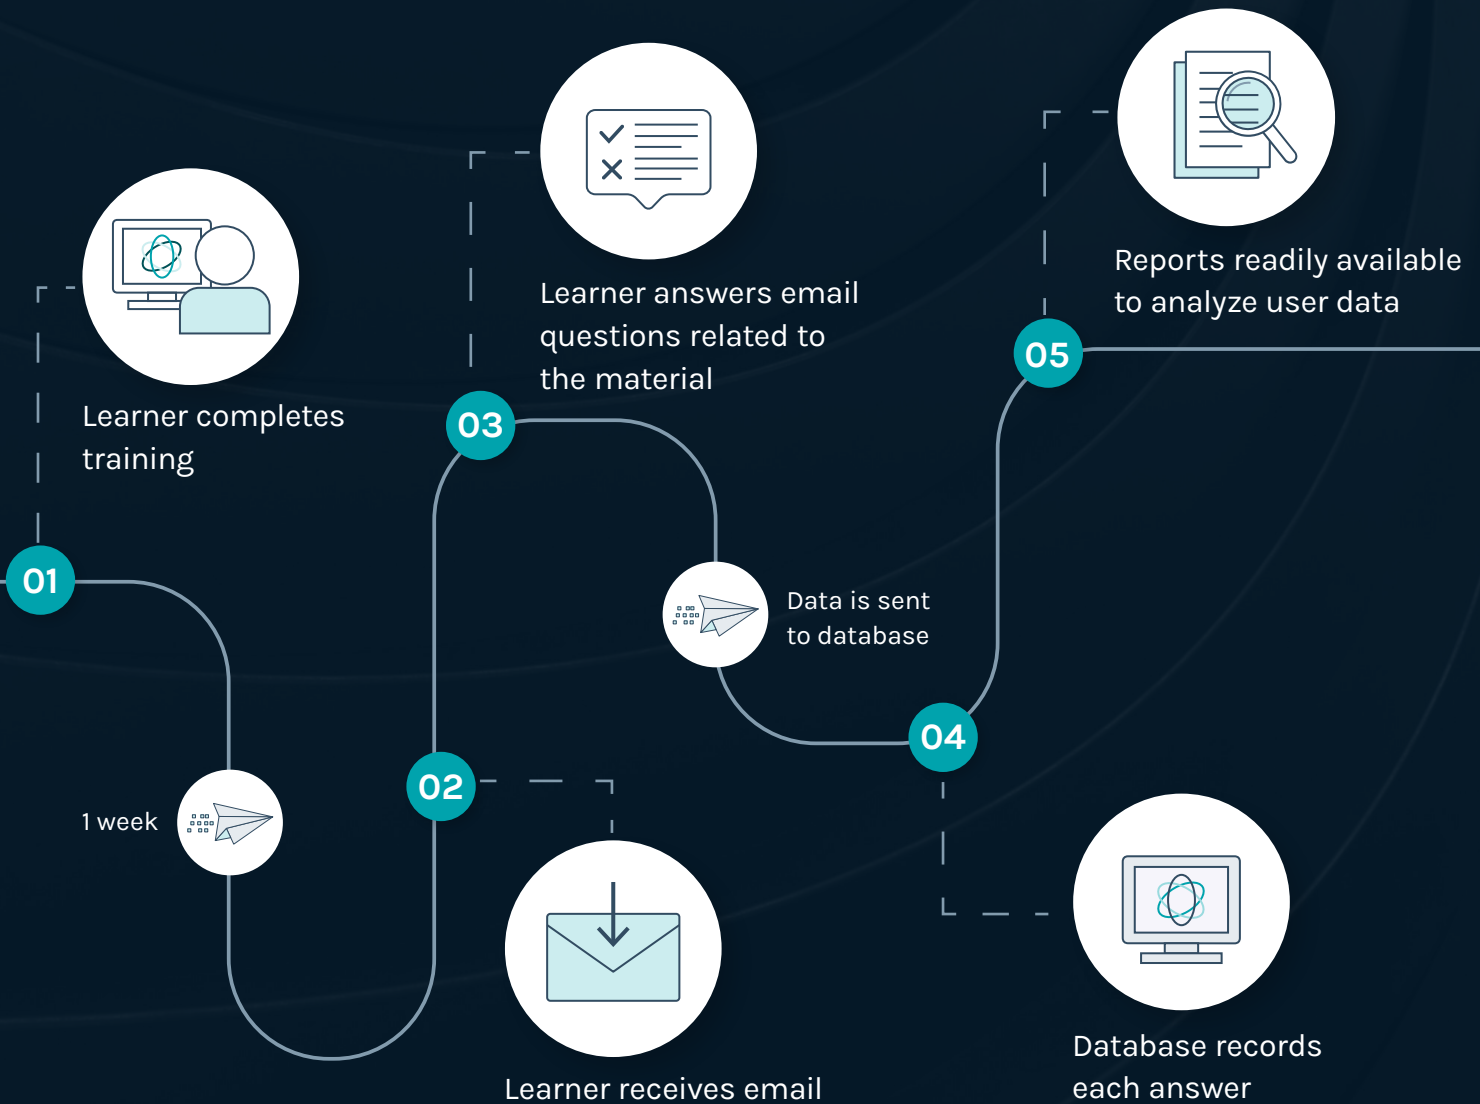

Remember! Follow-up is essential when conducting training to ensure your learners maintain a high retention rate!

- Mitigate the effect of time on retention with follow-up
- Continuous reinforcement via succinct emails where learners only need minutes to answer
- Sustained momentum built during training
- Instantaneous constructive feedback
- Customized scenarios for comprehensive training reinforcement
