

Health insurance for your gear unit

Say goodbye to unexpected shutdowns with MAAG GEAR online condition monitoring service. System continually monitors and analyses gear condition, enabling you to detect the early signs of wear and damage – and act before it becomes a problem.

Reduced unplanned downtime

Standard gear monitoring solutions measure critical operating conditions, such as bearing temperature, and compare them with the maximum allowable values.

Only significant changes are detectable, which is why the earliest indications of damage typically go unnoticed. By the time you realize there is a problem, you usually have just a few weeks – at best – before total breakdown occurs.

Our online condition monitoring service, uses sophisticated data analysis and continuous surveillance to detect defects at an early stage, giving you more time to schedule your maintenance. No more unplanned shutdowns – you can get strategic with your maintenance planning and save money along the way.

Achieve the best overall equipment efficiency

Continuous automated and expert-led analysis of in-depth data gives you a clear picture of the condition of your gear unit. By planning your maintenance activities in advance, you not only avoid equipment failure and the high cost of unexpected downtime – you can also make the most of every shutdown, generating further efficiencies.

Online condition monitoring services

Data without insight does not help anyone. Our condition monitoring services give you the best of both – in-depth data and expert analysis. The result? A predictive maintenance strategy that eliminates the risk of unplanned downtime.

How it works

Our online condition monitoring services support your maintenance team in all aspects of gear unit maintenance.

- The condition monitoring service uses sturdy and precise sensors located in critical points to gather all relevant operating data from the gear unit.
- The onboard data processing module is compact and fast, designed for simultaneous and synchronous data acquisition on all signal inputs.
- Accompanying analysis software with customizable user interface enables both remote and local monitoring.
- Expert analysis and guidance help you formulate a predictive maintenance strategy and avoid unexpected downtime.

What we offer

Whatever the size of your gear unit, the modularity of our condition monitoring service enables us to offer customized solutions for you. The sensors and onboard data processing module are included in the service, together with the wiring between those elements. For new or complete replacement gear units we install, test and commission the condition monitoring system together with the gear unit in our workshop. In case of retrofits, we install the sensors and data processing module on site and also carry out the commissioning.

Data collection, analysis and storage is all secured in dedicated cloud solution. Our team continuously supervises your gear unit and informs you of significant changes and possible problems. We will also provide periodic expert reports to give you an update on the condition of your gear unit and offer maintenance recommendations.

To summarize, the condition monitoring service includes:

- Supply of ready-to-use system
- Onsite installation and commissioning for retrofits
- Training on hardware and software
- Remote surveillance service
- Periodic expert reports and customer support

Online condition monitoring Optimise uptime and reduce costs

Home of Precision Engineering

For more than 100 years, the MAAG® Gear brand has successfully lived up to its founding vision and values.

Evolving demands in heavy-duty industries are driving the need for more efficient, reliable, and sustainable gear technologies. At MAAG, we are dedicated to providing high-precision solutions that respond to this need and enhance the productivity, sustainability and reliability of our clients' operations in cement, mining, and beyond. With a rich history of innovation and a robust product portfolio, we stand as trusted partners, committed to our mission of driving progress through precision. Discover how MAAG can help you elevate your business.
