

Python Treasure Hunt

Instructions

In small groups, students should receive a clue that should help them to decide which Python file they need to start debugging first/next.

Once they have fully debugged the script and it runs as expected, they must show this to their teacher who, if happy with the debugging, give the student team the next clue.

This will continue until all 5 Python scripts have been debugged where student teams will then have completed the challenge and be rewarded with a top secret from Robotical Ltd.
