Biosecurity

Land-based farming

Analysis Pathogen Management Team

- Map infection in facilities
- Implement measures for effective control of infection
- Advice for the improvement of facilities, (prevent recombination)
- Follow-up of facilities
- Eliminate infectious viruses and bacteria in plants
- Reduce mortality and increase fish welfare
- Increased knowledge and focus on prevention of infection

Cleaning equipment

- Central and decentralized washing systems
- Mobile washing systems
- Custom CIP systems
- Automated washing systems
- Improved HSE
- Efficient cleaning
- Reduced water and chemical consumption
- Customized solutions according to the customer's needs

Chemical solutions

- Daily cleaning
- CIP (Clean In Place)
- Reset wash-down
- Mechanical / technical maintenance
- Over 30 years of experience in chemistry
- Aquaculture approved detergents and disinfectants
- Environmentally friendly and easily biodegradable chemicals

Training & courses

- Hygienic design
- Hygiene & cleaning
- Assistance and advice during reset of land-based facilities
- Advice and input during design of new facilities, to ensure good hygienic design and washable facilities
