BioMap

Web-based analytical portal for monitoring of analytical results in the food industry

BioMap offers the food industry a complete web-based analytical portal for registration, trending and monitoring of analytical results. The system collects all kind of data from the environment, clean surfaces, water and product, for both microbiological, chemical and sensory parameters.

The system

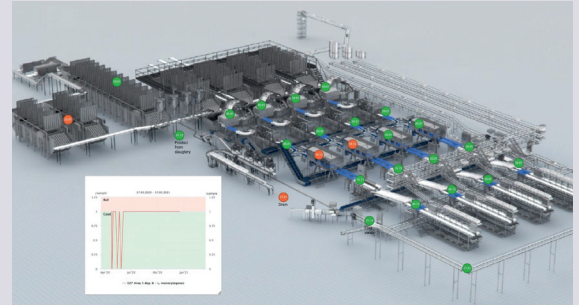

- Automatic import from laboratories and other data sources
- Dynamic sampling plans for water, products, environment, cleaning etc
- Meets requirements for BRCGS, FSSC, ISO, regulations etc.
- Registration of internal analysis
- Signing "read & understood" analytical results
- Integrated deviation handling
- Upload pictures and documents
- Customized dashboard

Benefits

- Fast and easy reports
- Always updated graphs and trends
- Alarms to selected people
- Updated results on floor charts

Quicker and fact-based answers enable more rapid and accurate measurements. This ensures the desired effect:

improved food safety.
