

Biography Andrea Cherubini

Andrea Cherubini serves as Chief AI Officer at Cosmo, where he leads the group's AI strategy and execution. He ensures that artificial intelligence is applied responsibly and effectively across therapeutic areas and medical devices, with a focus on developing products that are scientifically validated, regulatory compliant, and clinically impactful.

Andrea is the co-inventor of GI Genius™, the first FDA-cleared AI device for real-time analysis of medical videos. His leadership in clinical validation, regulatory approval, and global launch has made GI Genius™ a benchmark in the successful adoption of AI in medicine.

His career spans more than two decades across academia, industry, and applied innovation, including senior leadership roles at Linkverse and research positions at the Italian National Research Council and the Institute of Cancer Research in London.

Andrea holds a PhD in Biomedical Engineering and a Laurea in Physics. He has authored more than 80 scientific publications and is widely regarded as a thought leader in AI governance and its application to healthcare.
