

Biography Nhan Ngo Dinh

Nhan Ngo Dinh is a healthcare technology leader with a career dedicated to advancing the integration of artificial intelligence into clinical practice. At Cosmo, he heads the MedTech AI division, where he has been instrumental in shaping its vision of bringing real-time AI into healthcare and building one of the most recognized innovation platforms in the field.

He combines an expertise in engineering with extensive experience in the medical technology sector, having worked at the intersection of product development, regulation, and global partnerships. His professional path reflects a consistent focus on turning technological breakthroughs into solutions that can be safely and effectively deployed in clinical settings.

Throughout his career, Nhan has built a reputation for bridging the gap between complex technology and real-world medical needs. He has worked with multidisciplinary teams spanning clinicians, engineers, data scientists, and regulatory experts, fostering collaboration to accelerate the adoption of AI-enabled devices. His ability to connect strategic vision with execution has positioned him as a reference figure in the rapidly evolving landscape of medical AI.

Passionate about innovation with impact, Nhan continues to champion the development of technologies that enhance the quality of care and expand access to advanced medical solutions worldwide.
