

WENTRCEK ZEBULON
RELEASE 2: PINE TAR
MAR 2024

A person's legs and feet are visible in a forest setting, wearing dark pants and brown shoes. The ground is covered in dry leaves and twigs. The text is overlaid on the image.

Release 2: Pine Tar is a collection of light fixtures that are composed using three simple elements: black pine tar, glass, and wood.

Pine tar has been used as a wood preservative in Scandinavia for hundreds of years, where it protects homes, furniture, and ships from moisture and UV damage. Made by heating wood in a kiln to extremely high temperatures - but without letting it catch fire - it is, in a sense, "liquid smoke."

We've used it here as a color treatment for the wooden bodies of the light fixtures. The woods (yellow pine, oak, and marine plywood) were chosen for their distinct grain patterns, which are brought out during the application of the pine tar. You might detect the smoky scent of the pine tar, reminiscent of a campfire.

The glass panels, off-cuts from past work, are either pieces of wire glass or two-way mirror (also known, confusingly, as one-way mirror).

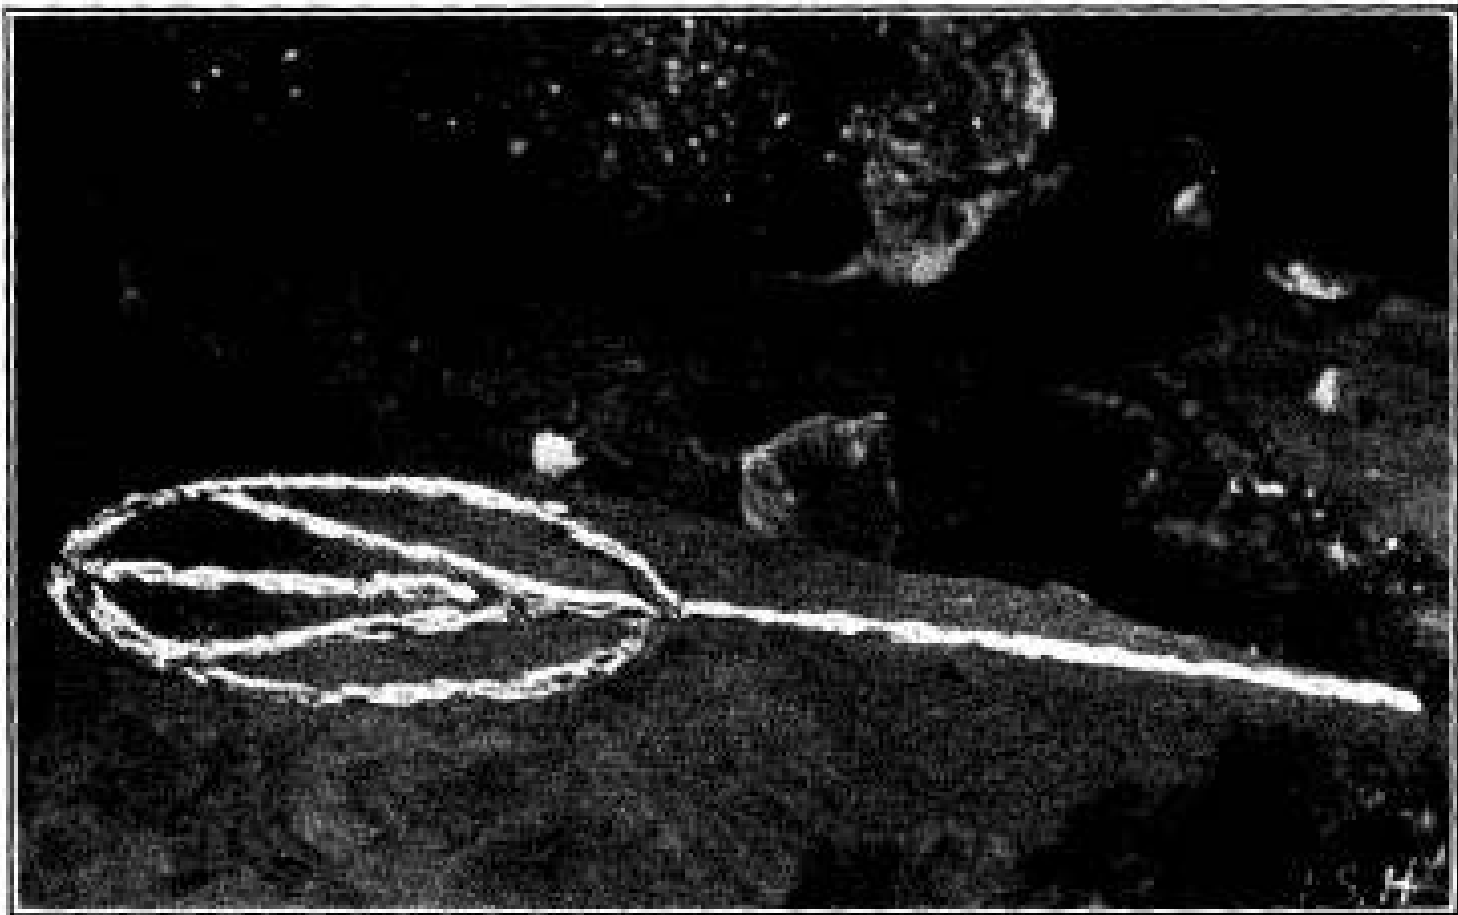

SERIAL NUMBER TAG

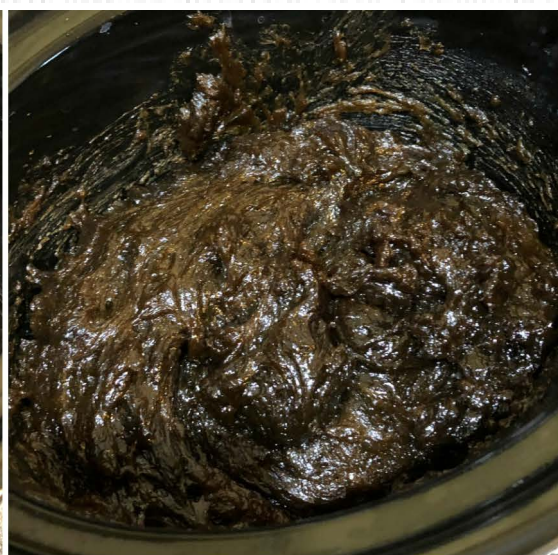

Each piece is assigned a serial number, recorded on a steel tag, to indicate its unique nature.
