what will you create?
yes
I can
The micro:bit is a small computer that can be programmed to perform various tasks. It has several inputs and outputs:

- **Input:**
  - Touch logo
  - Light sensor input
  - Sound sensor
  - Radio antenna
  - Reset button
  - Processor
  - Compass
  - Accelerometer
  - Pins

- **Output:**
  - 25 LED lights
  - Buttons
  - Microphone
  - Speaker
  - USB connector
  - Battery socket

The micro:bit can sense your touch, make noise, send and receive messages, and be controlled by the brains of the computer. It can also be programmed to do even more inputs and outputs.
