

## The Secrets Of The Universe

Mark your calendars, space lovers! 🌌 Here are the upcoming space events you won't want to miss:

### 🌠 February 20-28: Grand Planetary Alignment

All seven planets will be visible in the sky at once! In the short window after sunset, Venus, Jupiter, and Mars will shine brightly, while Saturn and Mercury will be closer to the western horizon—requiring a clear view to spot them.

### 🌕 March 14: Total Lunar Eclipse (Blood Moon)

A mesmerizing Blood Moon will grace the skies! This total lunar eclipse will be visible from the Americas, Antarctica, Alaska, and parts of Africa.

### 🪐 March 23: Saturn's Ring Plane Crossing

Saturn's rings will disappear from view for a short time as we observe them edge-on from Earth!

### 🌑 March 29: Partial Solar Eclipse

The Moon will cover up to 93% of the Sun at its peak! 🌞🌑 This eclipse will last nearly four hours, starting at 4:51 AM EDT, and will be visible from parts of the Americas, Europe, and Africa.

### 🌠 April 22: Lyrid Meteor Shower

A dazzling meteor shower producing 10-15 meteors per hour! 🌌 Since the radiant rises before midnight, try spotting meteors before the fat crescent Moon rises after midnight.

### 🌙 April 25: Triple Conjunction – A Smiley Face in the Sky

The waning crescent Moon will align with Venus and Saturn, forming an enchanting "smiley face" in the sky!
