It's not *just* about cleaning...

While cleaning has never been more important, we believe effective cleaning is more than 'just' the removal of soil. It means ensuring the health and safety of people, while making the job easier, simpler, more efficient and even fun. It means consistent results all over the world, while protecting the world.

i-dose makes the job of the cleaner instantly easier, while the green biodegradable formula ensures a smart choice for the environment and all life on this planet. With over 80.000 i-mops currently in use all over the world, i-dose is bound to make a difference.

...It's about *happy*
& *healthy* people

Upgrade your i-mop

Ultimate efficiency

If there's a better way to do it! We find it. The brand new i-dose Upgrade Kit for the i-mop is the result of our never-ending desire to innovate. Say farewell to standard cleaning detergents and the inefficiency of walking back and forth for refills. The i-dose cleaning pods are here to revolutionize your cleaning.

Perfect dosing.
Everytime.

How it works

The i-dose Starter Kit contains everything you need to upgrade your i-mop. It's a one-time investment after which you can save time and the environment by using i-dose cleaning pods. Just pop the pod and wait for the liquid to drop in the water.

Pop & drop

i-dose cleaning pods

Our super concentrated cleaning formula fits in one pod. One pod equals the exact right amount for one i-dose solution tank. The starter kit contains an assortment of our current offer. Choose the one for your cleaning job and get started.

i-dose cleaning pod holder

Holds up to 10 i-dose cleaning pod refills, enabling dispensing anywhere. The cleaning pod holder fits on the inside of the solution tank.

i-dose injector

The injector is inserted on the top port of the new i-dose Solution Tank. Place the pod here and close the cap. The injector pierces the cup with exactly the right pressure and the liquid disperses evenly in the solution tank.

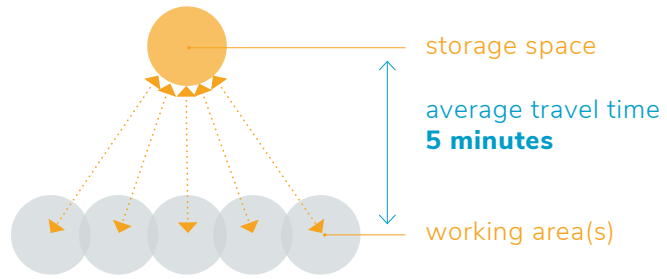

i-dose solution tank

Conveniently equipped with a side port for refilling water without needing to remove the injector. You can easily click-on and click-off the tank as you're used to.

We like it easy

Experience the joy of being freed from frequent trips to the supply closet or solution dispenser as you can now refill on the go. You just added the contents of a supply closet to your i-mop.

An expanding line of pods

The innovation of cleaning detergents never stops, which means an ever-expanding line of pods for our patented i-dose system. Our goal is to create a pod for every cleaning job.

Easy, fast, efficient

Refills were never more efficient. Just take the pod from the pod holder, place it in the injector and wait a few seconds for it to pop the pod and for the liquid to drop in the water. Pop and drop. It's that easy.

Gentle for nature

The super-concentrate dosage is exactly right, so you'll never spill liquids again. i-dose liquids are formulated to cradle to cradle standards and are entirely plant-based. Combine this with the dramatic reduction in water usage by the i-mop and you're quickly meeting sustainability goals. Eco label and Cradle to Cradle certifications are pending.

A strong duo

The exceptional cleaning effectiveness of the i-mop and the super-concentrated formula of the i-dose cleaning pods make for a strong duo. This unparalleled synergy provides a new standard in cleaning performance.

Raise the bar

we like it green

The i-dose cleaning kit has been designed for use with i-mop, unlocking the auto scrubber's full mechanical power to create superior cleaning results. All i-dose formulations are low foaming and non-corrosive to assure reliable operation and set a new standard in environmental health and safety. Welcome to the **green** side.

Unique packaging and dispensing minimizes the ecological footprint

No airborne hazards in terms of inhalation or volatility

No perfume. Safe to use around people with allergies and in food industries

No toxicological or ecological risks as the formula is biodegradable

Minimal effort. Maximum results.

It's not easy to get the dosage of a standard detergent exactly right. Many cleaners unintentionally overdose. This is bad for the environment and bad for your finances. Overall 6% of the cleaning budget is spent on cleaning detergents. Needless to say that it pays out to get the dosage exactly right.

The environment.

The formula is green and you'll never overdose again.

Money.

Never buy more than you actually use.

**With i-dose
there's no
waste of:**

Effort.

The floors get perfectly clean thanks to the right dosage.

Time.

No more walking back and forth for refills.

Underdose = floors don't get cleaned properly, germs remain
Overdose = slippery floors, residue remains and attracts germs, waste of detergent (harmful for the environment) and budget

Faster

Exactly the right amount of cleaning detergent in one easy action. Just place the pod in the injector, pop it and wait for the detergent to drop. Never walk back and forth again for refills. Enjoy the ease of carrying up to 10 refills with you.

Cleaner

The super concentrated formula fits everything you need in one small pod. Combined with the power of the auto-scrubber this ensures unparalleled cleaning results. You use the perfect amount of detergent so you'll never underdose or overdose again.

Greener

The super concentrated formula is entirely green. The plant-based sources are produced using renewable energy. After use, you can dispose the water safely as the green formula breaks down naturally. Finally the pods are recyclable in any standard recycling bin

Safer

As overdosing is a thing of the past, so are slippery floors. i-dose is fragrance free so it's safe to use in the food industry and around people with allergies. As you never have to touch the chemicals, you won't get any residue on your hands.

Better for everyone

This is the ideal high-level cleaning formula that can be used in one quick and easy action. It's fun to use for the cleaner, offers impeccable cleaning results and is harmless for the environment.

Innovative cleaning solutions

The ultra-concentrated formula of the i-dose* range is developed at HYGENIQ, based in Enschede, the Netherlands. HYGENIQ is the leader in sustainable and cradle-to-cradle approved cleaning solutions. The production process and the detergent are both eco-friendly.

E52 Daily floor cleaner

Mild but effective daily use hard floor cleaner. Dislodges soils commonly found on most floor surfaces without leaving residue that can promote resoilage or create slippery conditions.

E33 Sanitary floor cleaner

Safe and mildly acidic cleaner. Suitable for most hard floor substrates and grout, especially designed to remove organic soils, soap scum, calcium, limescale and other soils commonly found on restroom floors.

E73 Degreasing floor cleaner

Degreasing floor cleaner. Suitable for all hard floor substrates. Especially effective in removing animal and vegetable-based grease from foodservice environments, and petroleum-based grease from automotive, industrial and retail environments.

An expanding line of pods

The innovation of cleaning detergents never stops, which means an ever-expanding line of pods for our patented i-dose system. Our goal is to create a pod for every cleaning job.

*All i-dose liquids are classified as non-hazardous goods and each one has safety data-sheets available in 12 different language

It's all in **the mix**

No shaking required

The viscosity of the i-dose is the same as water. When the liquid drops it completely disperses in the tank.
