

M154 - Coordinate Geometry

Badge Specific Essential Concepts

- ❖ Proofs of theorems can sometimes be made with transformations, coordinates, or algebra; all approaches can be useful and in some cases one may provide a more accessible or understandable argument than another. [NCTM Essential Concept EC.GM.GARP.3]

Administration Notes

This Pre-Post Task is to be used as a tool for students to understand their learning. When administering this task, it is important to highlight a few things for students:

- Students will have the opportunity to complete the task at the beginning and the end of this badge. This is because we want students to be able to see how much they've learned and reflect on that learning in ways that matter to them.
- The work on the task will not be graded. The task is not a quiz or a test - it is designed to support students in understanding how much they have learned from the beginning of the badge to the end.
- Students can have access to any technology that they typically use during classroom instruction to complete this task.
- Students should work individually on the task.

Please share these things with students, reinforcing the idea that this task has been designed to support them in reflecting on the mathematics they have learned. In some tasks, students may create work in different places. It is helpful for them to have their own online folders to store their pre-post tasks as well as any supporting artifacts, such as screenshots from online tools that they use.

Task Analysis

The purpose of the task analysis section is to report on student performance at two points in time -- before and after badge instruction. Complete a table for each student based on an analysis of their responses. You can create summary data for yourself if you choose to understand more globally how students are doing on the concepts measured by the task.

PRE

Were there any interesting or instructionally useful responses or insights from students? Please record those here:

Question/Look For	Blank or similar	Emerging	Approaching	Meeting	Other Notes
(1) Student is able to determine the perimeter and area of the triangle and justify it with calculations.					
(2) Student is able to locate at least one point P such that the resulting figure is a parallelogram.					
(3) Student understands that the figure is not a rhombus, and justifies their position mathematically.					
(4) Student is able to select the appropriate classifications for the resulting figure and justify them through proof.
