GMUND

STATEMENT on environment and health

For molo fire retardant paper DB281, GB296, WH305

We hereby confirm that no substances of concern are used in the manufacturing process of fire-retardant paper.

The chemicals used comply with the European REACH regulation.

We have not added any product above 0.1% (w/w) on purpose listed in the actual SVHC.

When used as intended, there are no known harmful effects on human health.

The paper does not contain any substances with endocrine properties.

The release of harmful substances during use of the final product is not expected.

The paper itself is recyclable and can be disposed of in the waste paper cycle after use.

Several other environmental certifications and considerations for this paper are available upon request, including FSC® certification, PFAS certification, Water Saving Technologies, Environmental Profiles and more.

Gmund, March 18, 2026

A handwritten signature in blue ink, appearing to read 'Stephan Treske', is written over a horizontal line.
