

Four Things to Understand about Story Points

- 1 Story points are relative
- 2 The units are meaningless

Units Are Meaningless

Estimating items as **50:100** is the same as estimating **10:20**, **1:2** or even **0.1:0.2**.

A Venn diagram consisting of three overlapping light blue circles. The first circle on the left contains the text "50:100". The second circle in the middle contains the text "1:2". The third circle on the right contains the text "10:20". White equals signs are placed in the overlapping regions between the first and second circles, and between the second and third circles, indicating that all three ratios are equivalent.

$$50:100 = 1:2 = 10:20$$
