

# Safeguard users and protect your hybrid workforce with FusionProtect.

User flexibility and rapid cloud adoption have a host of benefits. Unfortunately, they've also expanded the threat surface, introduced security gaps, and negatively impacted user experience.

## The new work paradigm:

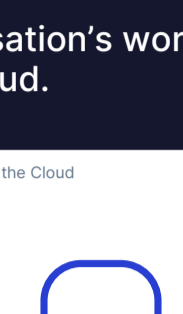

Hybrid work is here to stay.

78%

of organisations support a mix of employees working remote and in-office.

Source: 2023 Security Service Edge (SSE) Adoption Report (Cyber Security Insiders, Axis)

Cloud adoption has accelerated.

50%

of organisation's workloads are run in the public cloud.

Source: 2022 Flexera State of the Cloud

Growing concerns with ensuring remote user security.

47%

of organisations report off-site workforce as their top challenge.

Source: 2022 Security Visibility Report (Cybersecurity Insiders)

## Organisations and security teams need to adapt

To ensure secure and seamless access, IT leaders must:

Simplify the access process for private applications.

Enforce least privilege, contextual, and continuous access control.

Prevent gaps in visibility and security coverage.

Provide secure connectivity across multiple app types and destinations.

Deliver a high-quality user experience.

Reduce tool sprawl and infrastructure complexity.

## Organisations are adopting consolidated cloud-based security

65% plan on adopting SSE within 2 years.

Source: 2023 Security Service Edge (SSE) Adoption Report (Cyber Security Insiders, Axis)

80% will have unified web, cloud services and private access using SASE/SSE by 2025.

Source: Gartner SASE Market Guide-2022

39% see an SSE platform as the most critical technology for a zero trust strategy.

## Benefits of FusionProtect

Securely protect all private applications including nonstandard and custom.

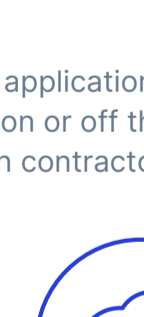

Ensures zero trust with granular controls based on user, device, location, and application.

Simplifies the user experience by minimising the manual steps required to secure their activities.

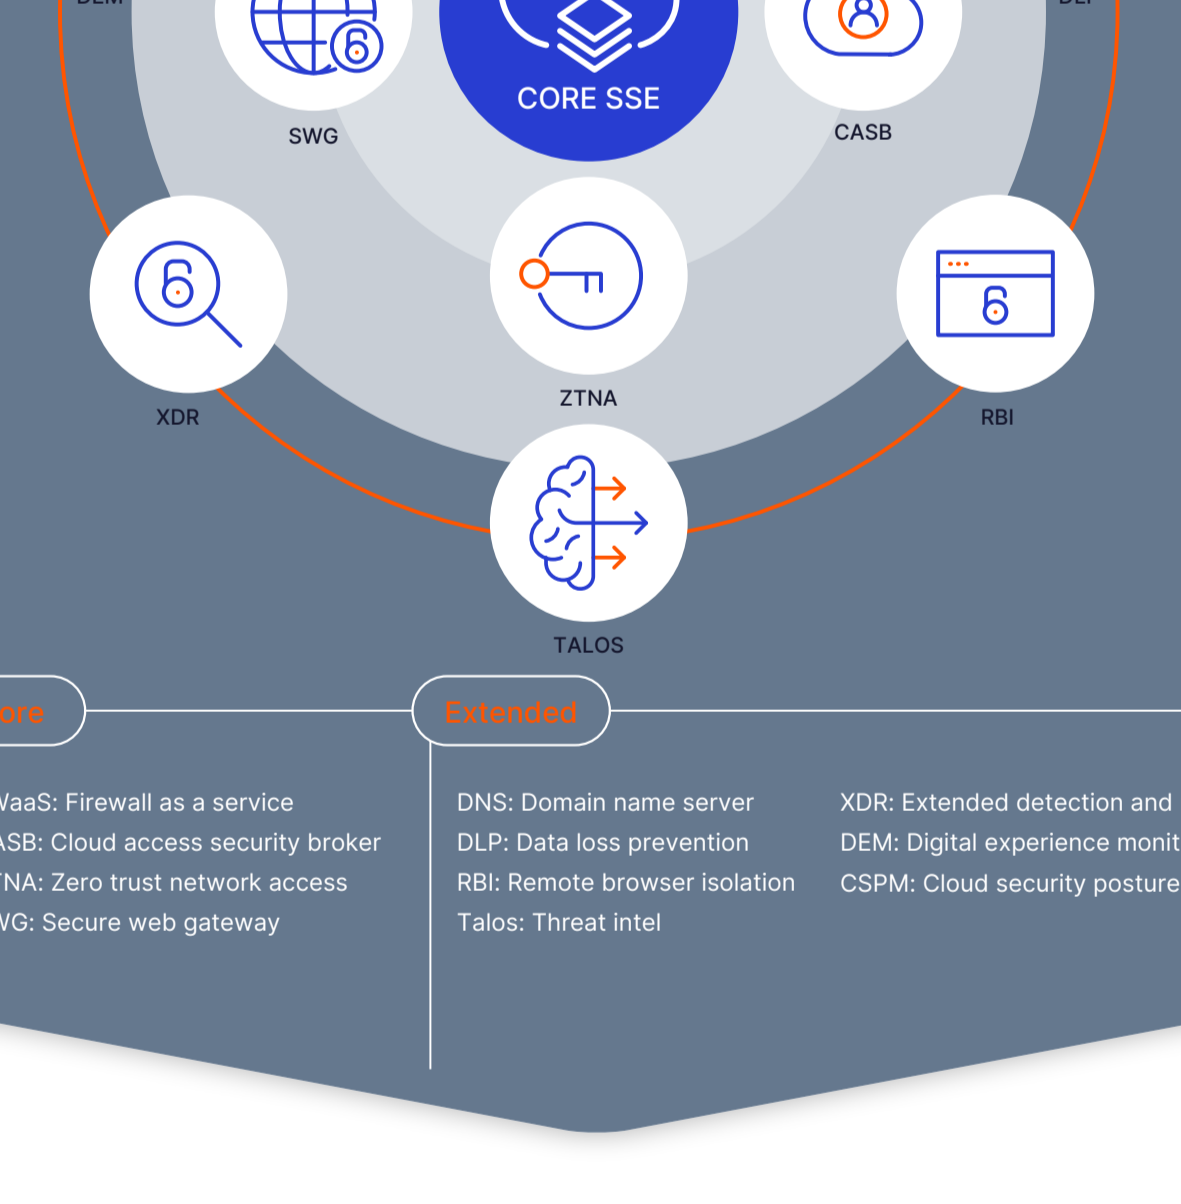

Improves security efficacy with industry-leading Cisco threat intelligence.

Streamlines management and enhances ease-of-use with a unified administration console.

## FusionProtect expanded view of security convergence

### Core

- FWaaS: Firewall as a service
- CASB: Cloud access security broker
- ZTNA: Zero trust network access
- SWG: Secure web gateway

### Extended

- DNS: Domain name server
- DLP: Data loss prevention
- RBI: Remote browser isolation
- Talos: Threat intel
- XDR: Extended detection and response
- DEM: Digital experience monitoring
- CSPM: Cloud security posture management

Accelerate detection, investigation, and remediation.

Improve user experience for better productivity.

Streamline deployment and management via a unified console.

Protect users, applications, and resource, on or off the network - even contractors and vendors.

Simplify operations by consolidating security capabilities into one cloud-based tool.

Enforce Zero Trust with comprehensive access control.

## FusionProtect converged security reduces risk and delivers value

### Improved Security

Risk is mitigated across the threat landscape with a dramatically reduced attack surface. Malicious activity is efficiently identified and blocked, and incidents resolved quickly to ensure business continuity.

30% higher security efficacy

£1m reduction in breach related costs (over - 3 years)
