

Clinic to Cryostorage

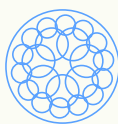

For 35 years, Reprotech has provided the industry's most secure and innovative end-to-end cryostorage solutions.

End to End Cryostorage Solution

Automatic Transfer

Automatic transfer management with clinics ensures patient consent, streamlines specimen movement to secure facilities, and reduces the risks and responsibilities of onsite storage.

Cryostorage

With five strategically located biorepositories, we offer convenient, reliable long-term storage supported by 24/7 monitoring and digital tracking.

Guardian Monitoring System

A single platform that combines weather alerts, cryogenic tank telemetry, and facility monitoring—providing real-time notifications and guided actions to safeguard inventory and operations.

Digital Witnessing - Smartsleeve™ & Matcher™

Reprotech has partnered with Matcher to deliver the industry's most advanced complete-loop witnessing system. At the center is our proprietary Smartsleeve™—a device created to enhance identification, strengthen safety, and simplify electronic witnessing. Smartsleeve™ integrates seamlessly with IMT Matcher™'s barcode-based IVF witnessing and traceability system while fitting smoothly into existing clinic workflows. It is also designed with broad compatibility to integrate within diverse electronic witnessing environments.

The locking design secures specimen containers by fitting directly over existing canes, keeping labels visible for easy identification while minimizing the risk of dislodging vitrification devices or vials. Unlike competitor products, Smartsleeve™ is fully compatible with industry-standard labware, eliminating the need for additional equipment or added costs. With an integrated data matrix supporting RFID, barcode, and QR code technology, Smartsleeve™ ensures a complete and verifiable digital chain of custody from clinic to Reprotech and back again.

Shipping & Logistics

For over 35 years, Reprotech has set the standard for safe and reliable specimen shipping. Our safety-first approach combines dry shippers, GPS tracking, Sendum temperature monitoring, and our proprietary Smartsleeve™ technology to protect every sample in transit. Behind the scenes, our advanced monitoring system follows vans and shippers in real time, providing instant alerts so our team can respond the moment they're needed.

Our People, Our Systems

Our team and systems safeguard 24/7/365 to protect and monitor every specimen in our secure biorepositories. With five strategically located cryostorage facilities, we are prepared for every scenario. Each site is designed with reinforced storm rooms and bulk liquid nitrogen reserves to ensure business continuity. Our tanks are equipped with state of the art tank monitoring using Cryotherm and our internal monitoring capabilities. At the center of it all is Guardian—our proprietary monitoring and insights platform. Guardian integrates building management, process tracking, and incident response into a single, intelligent system, giving our staff the tools to respond quickly and effectively in any situation.
