## Creating an Active Lifestyle

Living an active lifestyle is one of the most powerful predictors of good health. As little as 150 minutes of moderate to vigorous physical activity each week has been shown to reduce the risk of developing chronic health conditions like heart disease, diabetes, hypertension, cancer, and stroke.<sup>1</sup>

**If your health goals include creating a more active lifestyle, here are some tips that may help:**

**Begin where you are.** Honor where you are right now and advance your activity levels slowly. Before making any big changes to your normal routines, consult with your primary care provider, especially if you are managing a preexisting medical condition.

**Choose your metrics.** Choose metrics to track your fitness progress. For example, you could monitor minutes, steps, distance, or the number of days per week you exercise. Metrics offer concrete information that you can use to determine if and when adjustments are needed.

**Schedule it.** To be more consistent with exercise, try blocking time on your calendar several days each week to serve as a visual reminder.

**Focus on activities you love.** Focus on the exercises you enjoy most. Whether it be yoga, running, swimming, or team sports, you will be more likely to follow through with your workouts when you look forward to them.

**Make movement part of your daily life.** Integrate physical movement into your daily life by scheduling walking meetings, taking the stairs, or riding your bike when you can leave the car behind.

*The goal of an active lifestyle is for exercise to become who you are rather than just something you do. To get started, assess your current habits, and look for creative ways to weave more physical activity into your daily life.*
