

WHAT DOES TANIUM DO?

COURSE DESCRIPTION

In this course, you will be introduced to the Tanium platform and explore several use cases of how Tanium can help secure and manage devices and applications across increasingly complex and distributed networks. You will see how Tanium modules provide visibility, control, and remediation across all your endpoints to create a safe and higher-performing digital estate from a single platform.

DELIVERY OPTIONS

Web-Based
Training (WBT)

ADDITIONAL RESOURCES

- [Tanium Solutions & Bundles](#)
- [Tanium Resource Center](#)

Delivery options and duration

WBT: 45 minutes

Prerequisites

None

Target audience

This course is intended for those unfamiliar with Tanium and looking to better understand the capabilities and common use cases of the Tanium platform.

Registration information

This training course is free of charge to anyone interested. Please click [here](#) to learn more about how to access this training on the Tanium Learning Center.

COURSE OBJECTIVES

- Identify real-world use cases of Tanium to streamline operations, enhance security, and boost efficiency within large organizations
- Describe how Tanium Asset can accurately inventory hardware and software for visibility and compliance
- Discuss how Tanium Discover helps find, report on, and take action against unmanaged endpoints
- Explain how Tanium Patch manages and mitigates vulnerabilities through OS patching
- Discuss how Tanium Deploy distributes software updates and applications across endpoints
- Explain how Tanium Benchmark assesses system configurations against multiple risk vectors and industry benchmarks
- Explain how Tanium Comply assesses system configurations against security best practices (e.g. CIS Benchmarks) and identify system vulnerabilities

COURSE OUTLINE

INTRODUCTION

- Welcome
- What is Tanium?
- Introduction to Tanium use cases

OVERALL VISIBILITY

- Gaining visibility into IT infrastructure

ASSET MANAGEMENT AND DISCOVERY

- Hardware and software inventory
- Find and take control of endpoints

OS PATCHING

- Patch automation

SOFTWARE DISTRIBUTION

- Automated third-party updates

VULNERABILITY AND COMPLIANCE MANAGEMENT

- Risk posture
- Compliance management

WRAP UP

- Summary and resources
