

New RemoteConnect™ Features with PowerView® Gen 3

With PowerView® Gen 3 Automation, RemoteConnect™ has been completely reimagined. Whether you are a consumer, installer, or dealer, RemoteConnect allows for greater control of PowerView Homes than ever before.

Before PowerView Gen 3, RemoteConnect enabled Scene activation from anywhere in the world. Now, you not only can operate Scenes, but you can control individual shades as well as create, edit, and delete Scenes and Schedules.

And best of all, as a dealer and installer, your client can add you as a User of their home at any time. You can remotely access their PowerView Home and troubleshoot many questions right from your office.

Read below to learn exactly what features and controls RemoteConnect provides with PowerView Gen 3 for both you and your clients.

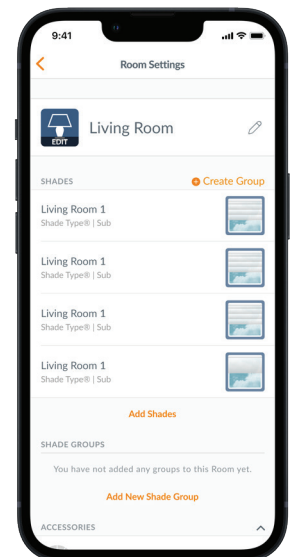

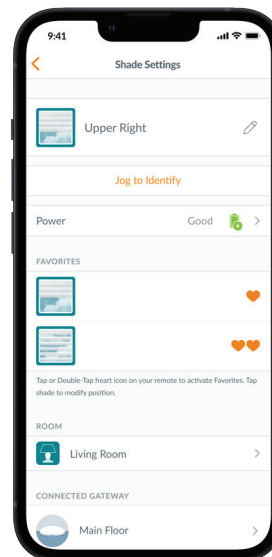

High Level Benefits

- Control virtually your entire Home, including individual shades and Scenes from almost anywhere in the world.
- Two-way communication - see your shades move in real time in the app, so you know each shade received the command you sent.
- **Add a user at any time to the PowerView Home** — this includes a homeowner adding the dealer or installer to view the Home and troubleshoot remotely, drastically reducing house calls!
- Create, modify, and delete Scenes and Schedules.
- Modify individual shade and Room settings.

Full list of features and benefits

- Individual shades
 - What you can do:
 - Operate your shade
 - Jog to identify
